Chapter 1 Getting Started with OPNET 1

1.1 OPNET IT Guru and Modeler 1
1.1.1 Installing OPNET IT Guru and Modeler 2
1.1.2 OPNET License Server 2
1.1.3 Folders Created at Installation 3
1.1.4 Enabling Optional Product Modules 3
1.2 Managing OPNET Preferences 4
1.2.1 The Preferences Editor 5
1.2.2 Changing Preference Values 6
1.2.3 The Environment File 6
1.3 Viewing Documentation 7
1.4 Working with Files and Model Directories 7
1.4.1 File Chooser Modes 9
1.4.2 Adding Model Directories 9
1.5 Projects and Scenarios 11
1.6 Working with Projects 12
1.6.1 Opening an Existing Project 12
1.6.2 Creating a New Project with the Startup Wizard 12
1.6.3 Deleting a Project 14
1.7 Working with Scenarios 15
1.7.1 Creating Scenarios 15
1.7.2 Managing Scenarios 16
1.7.3 Selecting a Scenario 18
1.7.4 Importing Scenario Components 18

Chapter 2 Creating Network Topology 21

2.1 Introduction 21
2.2 Object Palette Tree Utility for Creating Network Topology 22
2.2.1 Model Naming Conventions 24
2.2.2 Models in the *internet_toolbox* Palette 25
2.3 Working with the Object Palette Tree 26
2.3.1 Opening the Object Palette 26
2.3.2 Searching for Models in the Object Palette 27
2.3.3 Creating Custom Models 27

2.4 Creating Network Topology 28
2.4.1 Creating Network Topology: Adding Nodes 29
2.4.2 Creating Network Topology: Adding Links 29
2.4.3 Creating Network Topology: Deleting Nodes or Links 30
2.4.4 Creating Network Topology: Other Editing Operations 30
2.5 The Rapid Configuration Tool 30
2.5.1 Creating Network Topology with the Rapid Configuration Tool 30
2.5.2 Example: Creating Ethernet LAN with the Rapid Configuration Tool 31
2.6 Configuring Link Objects 32
2.6.1 Changing Basic Link Properties 32
2.6.2 Verifying Link Connectivity 33
2.7 Failing and Recovering Network Elements 35
2.8 Subnets 36
2.8.1 Adding a Subnet Object 37
2.8.2 Moving Around the Network Hierarchy 38
2.8.3 Creating a Network Topology with Subnetworks 40
2.8.4 Moving Objects between Subnets 40
2.9 Creating Topology Annotation 41
2.9.1 Adding Annotation Palette Object to the Project Workspace 42
2.9.2 Modifying Attributes of Annotation Palette Objects 42
2.9.3 Showing/Hiding Annotation Palette Objects in the Project Workspace 43
2.10 Removing Node Clutter 43

Chapter 3 Configuring Network Topology 45

3.1 Introduction 45
3.2 Object Attributes 46
3.2.1 Types of Attributes 46
3.2.2 The Object Pop-Up Menu 47
3.3 The Edit Attributes Dialog Box 49
3.3.1 Accessing Attribute Description 50
3.3.2 Working with Compound and Grouping Attributes 51
3.3.3 Attributes with Multiple Instances 51
3.3.4 Filtering Attributes 52
3.3.5 Finding Attributes Using Regular Edit Attributes Filtering Feature 53
3.3.6 Finding Attributes Using Advanced Edit Attributes Filtering Feature 53

3.4 Configuring Object Properties 54
3.4.1 Changing Attribute Values of a Single Object 54
3.4.2 Changing Attribute Values of Multiple Objects 54
3.4.3 Editing Selected Objects 55
3.4.4 Editing Similar Nodes or Links 56
3.4.5 The Model Attribute of an Object 56
3.5 Promoting Object Attributes 57
3.5.1 Promoting an Object Attribute 59
3.5.2 Unpromoting an Object Attribute 60
3.5.3 Configuring Promoted Object Attributes at the Simulation Level 60
3.5.4 Specifying Values for Promoted Attributes at the Simulation Level 61
3.5.5 Configuring Promoted Attributes at the Subnet Level 63
3.5.6 Using the Wildcard Option for Assigning Values to Multiple Promoted Attributes 64

Chapter 4 Configuring and Running a Simulation 67

4.1 Simulation Statistics in OPNET 67
4.1.1 Statistic Collection Modes 68
4.1.2 Deciding Which Statistics to Collect 70
4.2 Selecting Simulation Statistics 71
4.2.1 Choose Results Window 71
4.2.2 Selecting Simulation Statistics for a Single Specific Network Object 74
4.2.3 Selecting Simulation Statistics for the Whole Scenario 74
4.2.4 Selecting Global Simulation Statistics 74
4.2.5 Statistic Information and Data Collection Panes 75
4.2.6 Statistic Draw Styles 76
4.2.7 Statistic Collection Modes 76
4.2.8 Modifying Statistic Collection Properties 78
4.3 Configuring and Running a Simulation 79
4.3.1 Configure/Run DES Window: Simple Mode 80
4.3.2 Configure/Run DES Window: Detailed Mode 82
4.3.3 Simulation Sequence Editor 84
4.3.4 Configuring and Executing a Single Simulation Scenario 85
4.3.5 Configuring and Executing Multiple Simulation Scenarios through Manage Scenarios 85
4.3.6 Setting Values for Promoted Attributes 86
4.3.7 Simulation Execution 87
4.4 Results Browser 90
4.4.1 Source Pane of the Results Browser 90

4.4.2 Results Pane of the Results Browser 92
4.4.3 Preview and Presentation Panes of the Results Browser 94
4.4.4 Analysis Panels 96
4.5 Viewing Simulation Results with the Results Browser 97
4.5.1 Viewing Simulation Results for the Current Scenario 97
4.5.2 Viewing Simulation Results for a Specific Object in the Network 98
4.5.3 Viewing Simulation Results for Scenarios in This and Other Projects 98
4.5.4 Comparing Simulation Results 98
4.5.5 Adding New Statistics to Existing Graphs 99
4.5.6 Finding Top Results 99
4.5.7 Viewing Results with the Time Controller 101
4.6 Manipulating Analysis Panels 102
4.6.1 Hiding/Showing Analysis Panels 102
4.6.2 Arranging Analysis Panels 103
4.6.3 Deleting Analysis Panels 103
4.6.4 Converting Panels into Annotation Objects 103
4.6.5 Reloading Analysis Panels with New Results 105
4.7 Advanced Analysis Panel Properties 106
4.7.1 Panel Area Pop-Up Menu 107
4.7.2 Graph Area Pop-Up Menu 108
4.8 DES Log 110
4.8.1 Discrete Event Simulation Tab 111
4.8.2 Miscellaneous Tab 112

Chapter 5 Standard Applications 115

5.1 Modeling Traffic Sources in OPNET 115
5.2 Types of Traffic Source Models in OPNET 115
5.2.1 Explicit Traffic Models 116
5.2.2 Background Traffic Models 117
5.2.3 Hybrid Traffic Models 118
5.3 Including Applications in a Simulation Model 118
5.3.1 *Application Config* Utility Object 120
5.3.2 Configuring Standard Applications 122
5.4 Description of Standard Applications 124
5.4.1 Database 124
5.4.2 E-mail 127
5.4.3 FTP 128
5.4.4 HTTP 129
5.4.5 Print 133
5.4.6 Remote Login 134

5.4.7 Video Conferencing 135
5.4.8 Voice 136
5.5 Using Symbolic Node Names 140
5.5.1 Manually Configuring an Application's Source Preferences 140
5.5.2 Manually Configuring an Application's Destination Preferences 142
5.6 Application Statistics 143

Chapter 6 Advanced Traffic Generation Features 153

6.1 Introduction to Custom Applications 153
6.2 Configuring Tasks and Phases for Custom Applications 156
6.2.1 *Task Config* Utility Object 156
6.2.2 Specifying Task Definitions 157
6.2.3 Specifying Phase Configurations 158
6.2.4 Summary: Configuring Tasks for Custom Applications 165
6.3 Defining Custom Applications in OPNET 166
6.4 Example of Configuring Custom Applications in OPNET 168
6.5 Explicit Packet Generation Sources 172
6.6 Application Demands and Traffic Flows 175
6.6.1 Application Demands 176
6.6.2 Traffic Flow Demands 177
6.6.3 Baseline Loads 180
6.7 Custom Application Statistics 182
6.8 Statistics for Application and Traffic Demands 183
6.9 Statistics for Explicit Packet Generation Sources and Baseline Loads 188

Chapter 7 Specifying User Profiles and Deploying Applications 189

7.1 User Profiles 189
7.2 Specifying User Profiles 189
7.2.1 *Profile Config* Utility Object 190
7.2.2 Defining a User Profile 191
7.2.3 An Example of a Simple User Profile 192
7.2.4 Configuring Application Behavior within a Profile 193
7.2.5 Application Behavior Attributes 194
7.2.6 Profile Behavior Attributes 198
7.2.7 Configuring User Profiles 200
7.3 Examples of Configuring User Profiles 200

7.4 Using the Application Deployment Wizard for Deploying User Profiles 205
7.4.1 *Network Tree Browser* Panel 206
7.4.2 *Application Deployment Hints* Panel 207
7.4.3 *Dialog Box Controls* Panel 207
7.4.4 *Application Deployment Operations* Panel 208
7.4.5 Deploy Applications Option 209
7.4.6 Edit Destination Preferences Option 212
7.4.7 Edit LAN Configuration Option 212
7.4.8 Clearing Application Deployment 213
7.5 Deploying User Profiles without Application Deployment Wizard 214
7.5.1 Configuring Client Nodes 214
7.5.2 Configuring Server Nodes 215
7.5.3 Specifying Destination Preferences 217
7.5.4 Specifying Number of Clients in a LAN Object 217
7.5.5 Specifying the Transport Protocol Used by an Application 218
7.6 Common Mistakes in Profile Configuration and Application Deployment 219

Chapter 8 Transport Layer: TCP and UDP Protocols 223

8.1 Introduction 223
8.2 Supported TCP Features 224
8.3 TCP Configuration Attributes 227
8.4 Common Transport Layer Statistics 230

Chapter 9 Network Layer: Introduction to the IP Protocol 235

9.1 Introduction 235
9.2 Basic IP Configuration Attributes 236
9.2.1 Basic IP Configuration Attributes of an End Node Model 236
9.2.2 Basic IP Configuration Attributes of a Core Node 239
9.3 Managing IP Addresses 244
9.3.1 IP Addresses and Masks 244
9.3.2 Identifying Names of Interfaces Attached to a Link 245
9.3.3 Common Mistakes in IP Address Configuration 246
9.3.4 Auto-Assignment of IP Addresses 247
9.3.5 Clearing IP Address Assignment 249
9.3.6 Identifying Interface with a Specified IP Address 250
9.3.7 Exporting IP Address Allocation 251

9.4 Configuring Other IP Features 251
9.4.1 IP Compression 252
9.4.2 Basic Configuration of Routing Protocols 253
9.4.3 Configuring Different Types of IP Interfaces 255
9.4.4 Configuring IP Load Balancing 257
9.5 Internet Control Message Protocol 258
9.5.1 Specifying Ping Patterns 258
9.5.2 Deploying IP Ping Demands with the *ip_ping_traffic* Object 260
9.5.3 Deploying IP Ping Demands Using the Protocols Menu 261
9.5.4 Ping Statistics 262
9.6 Common IP Statistics, Tables, and Reports 263
9.6.1 IP Statistics 263
9.6.2 Visualization and Configuration Reports 263
9.6.3 Viewing Forwarding and Routing Tables 267

Chapter 10 Advanced IP Protocol Features 271

10.1 Network Address Translation (NAT) 271
10.1.1 Overview of NAT 271
10.1.2 Configuring NAT 273
10.1.3 Specifying Address Pools 273
10.1.4 Specifying Translation Rules 275
10.1.5 Deploying Translation Rules on Gateway Interfaces 276
10.2 IP Multicast 278
10.2.1 IP Multicast Features Supported in OPNET 278
10.2.2 Overview of Steps for Deploying IP Multicast Traffic 279
10.2.3 Defining Multicast Traffic 279
10.2.4 Configuring Source Nodes 281
10.2.5 Configuring Destination Nodes 282
10.2.6 Configuring Router Nodes 284
10.2.6.1 Static-RP Mechanism 285
10.2.6.2 Auto-RP Mechanism 286
10.2.6.3 Bootstrap Mechanism 288
10.2.7 Other Multicast Configuration Parameters 289
10.2.8 Multicast Statistics and Reports 290
10.3 IPv6 290
10.3.1 Overview of Supported IPv6 Features 290
10.3.2 IPv6 Addressing 293
10.3.3 Configuring Traffic for IPv6 Networks 295
10.3.4 Other IPv6 Options 296
10.3.5 IPv6 Statistics and Other Performance Evaluation Options 298

10.4 Quality of Service 299
10.4.1 Specifying Global QoS Profiles 301
10.4.1.1 Committed Access Rate Profiles 302
10.4.1.2 Custom Queuing Scheduler 303
10.4.1.3 RED and WRED Configuration 305
10.4.1.4 FIFO Profiles 307
10.4.1.5 MWRR/MDRR/DWRR Profiles 307
10.4.1.6 Priority Queuing Profiles 309
10.4.1.7 WFQ Profiles 309
10.4.2 Specifying Local QoS Profiles 309
10.4.2.1 Traffic Classes and Traffic Policies 310
10.4.2.2 WFQ/DWFQ Profiles 313
10.4.2.3 Priority Queue Profiles and Custom Queue Profiles 314
10.4.2.4 MDRR Profiles and DWRR Profiles 315
10.4.2.5 Policer Profiles 315
10.4.2.6 RED/WRED Profiles 316
10.4.3 Deploying Defined QoS Profiles on an Interface 317
10.4.4 Closing Remarks 319
10.4.5 QoS-Related Statistics 320

Chapter 11 Network Layer: Routing 321

11.1 Introduction 321
11.1.1 Deploying Routing Protocols in a Simulated Network 322
11.1.2 Configuring Routing Protocol Attributes 325
11.2 Routing with RIP 326
11.2.1 Introduction to RIP 326
11.2.2 Local RIP Configuration Attributes 328
11.2.3 RIP Interface-Specific Configuration Attributes 330
11.2.4 Configuring RIP Start Time 332
11.2.5 RIP Simulation Efficiency Mode 332
11.3 Routing with OSPF 334
11.3.1 Introduction to OSPF 334
11.3.2 OSPF Attributes 335
11.3.3 Configuring OSPF Processes 336
11.3.4 Specifying OSPF Configuration on Router Interfaces 339
11.3.5 Configuring OSPF 340
11.3.6 Configuring Link Costs for OSPF Routing 340
11.3.7 Configuring OSPF Timers 343
11.3.8 Configuring OSPF Areas 345
11.3.9 Configuring OSPF Area Border Routers 346

11.3.10 Configure the OSPF Start Time 347
11.3.11 OSPF Simulation Efficiency Mode 347
11.4 Common Routing Statistics 348
11.5 Viewing Routing Tables 351

Chapter 12 Data Link and Physical Layers 355

12.1 Introduction 355
12.2 Deploying and Configuring Simulation Models with Data Link Layer Technologies 356
12.3 Link Model Attributes and Statistics 356
12.4 Ethernet 358
12.5 Token Ring 360
12.6 Wireless LANs 363
12.6.1 WLAN Configuration Attributes 364
12.6.2 WLAN Statistics 370
12.7 MANET 370
12.8 Specifying Node Mobility 375
12.8.1 Defining a Node Trajectory 376
12.8.2 Configuring a Mobility Profile 379
12.9 Using the Wireless Deployment Wizard 380

Laboratory Assignment #1: Introduction to OPNET 387

Laboratory Assignment #2: Simple Capacity Planning 395

Laboratory Assignment #3: Introduction to Standard Applications 399

Laboratory Assignment #4: HTTP Performance 405

Laboratory Assignment #5: Modeling Custom Applications 411

Laboratory Assignment #6: Influence of the Maximum Transmission Unit on Application Performance 419

Laboratory Assignment #7: Transport Protocols: TCP versus UDP 425

Laboratory Assignment #8: TCP Features 431

Laboratory Assignment #9: IP Addressing and Network Address Translation 439

Laboratory Assignment #10: Providing Quality of Service Support 447

Laboratory Assignment #11: Routing with RIP 455

Laboratory Assignment #12: Routing with OSPF 459

Laboratory Assignment #13: Ethernet 465

Laboratory Assignment #14: Wireless Communication 473

Index 481
